Calendar Documentation

An Overview of the Calendar

A Calendar is intended to communicate opening times or contingency details from the consignor or consignee to the carrier.

A first Calendar message defines the schema for opening times and/or contingencies for the given period. Further Calendar messages can update this schema, or specify exceptions to the schema for a given day or period.

Calendar Scope

This message is used by consignor or consignee to forward information on opening times or contingencies of locations like warehouses, mills, plants etc. Typically, applicable to road and rail but may also apply to other transportation modes.

- communicate opening times (multiple for a weekday) for a certain location
- communicate contingencies at a certain location with slot times and quantity of contingent on lorry or tonnage base
- specify the validity time range of the calendar
- communicate updates on opening times or contingencies

Business Rules for Calendar

The following tables list the business rules that apply to each Calendar message type. There are no general rules that apply to both message types.

General Business Rules

Identifier	Business Rule
CALENDAR_00 1	If CalendarEntryPeriod specifies a weekday, then DateTimeRange specifies the date range within which the given times and contingencies apply to the weekday.
CALENDAR_00 2	Opening times and contingencies in an original Calendar message have to be explicitly defined. The default is that no contingencies are available.
CALENDAR_00 3	A Calendar message with CalendarStatus = "Amended" can only contain CalendarEntry entries for days or ranges that need to be

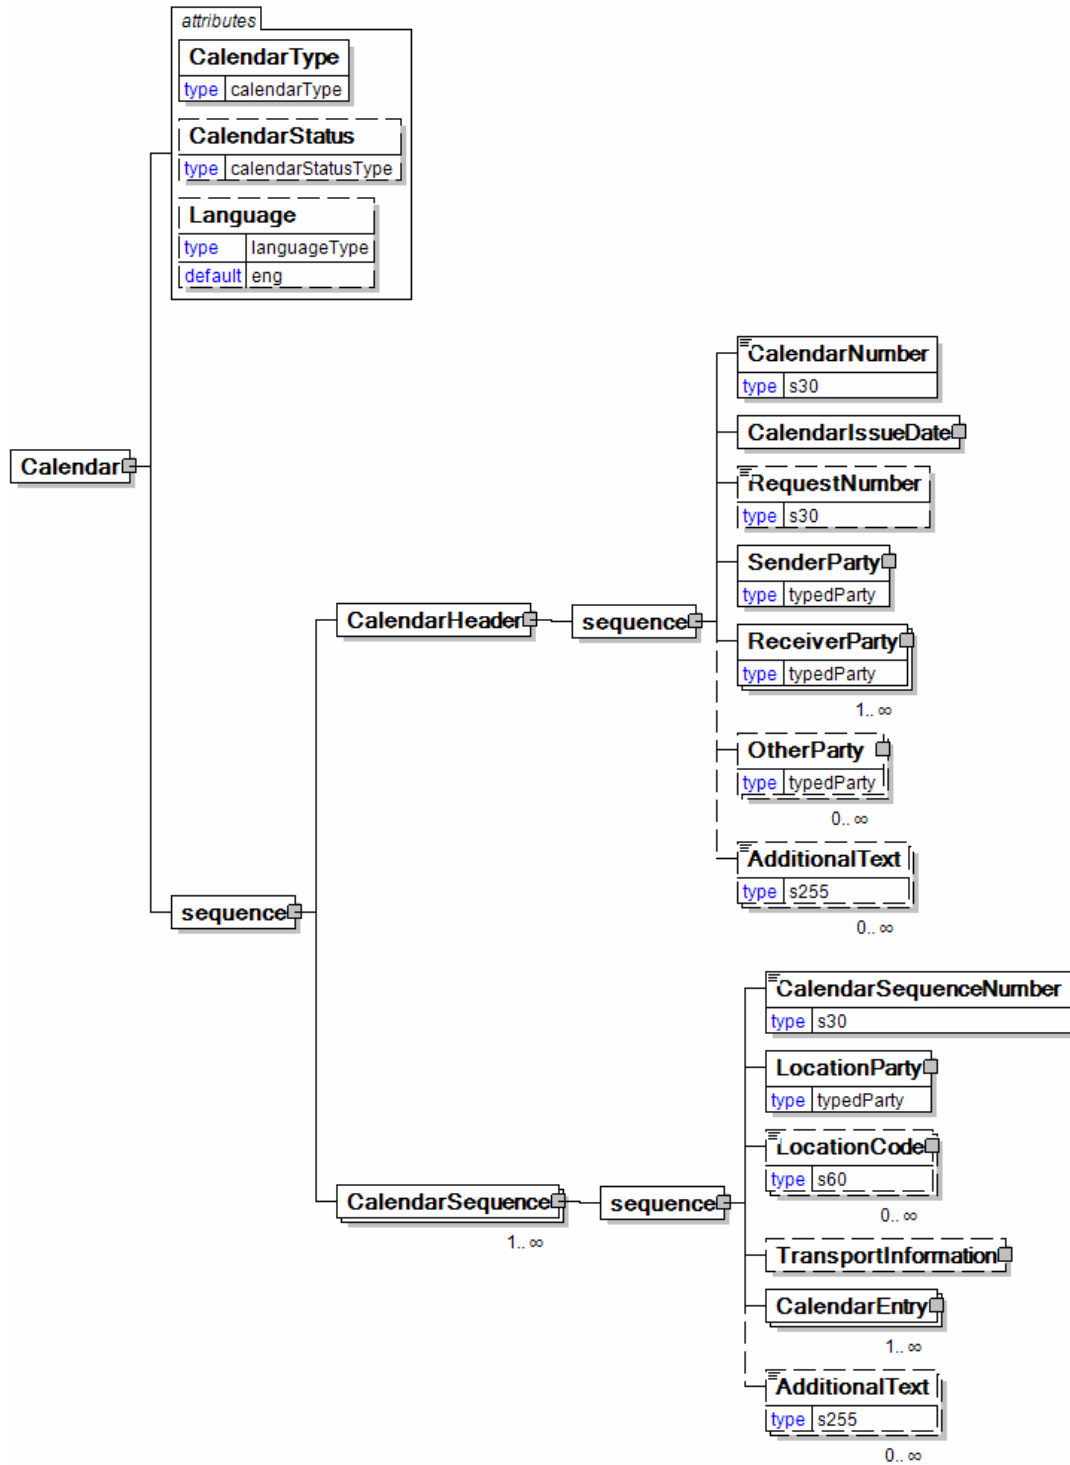

Calendar papiNet Standard - Version 2.31

	changed.
CALENDAR_00 4	<p>A Calendar message with CalendarStatus = "Amended" has to contain all slots for a given day or range in the specified CalendarEntry entries:</p> <ul style="list-style-type: none"> • Set TimeSlotAvailability = "No" for the contingencies or opening times that have been removed • Set TimeSlotAvailability = "Yes" for contingencies or opening times that are unchanged or added <p>We use the term "all slots" to refer to each of the slots originally received in the "Original" Calendar message for the given day or range.</p>
CALENDAR_00 5	<p>The receiver of a Calendar message with CalendarStatus = "Amended" has to process the TimeSlotInformation for every given day or period in the following way:</p> <ul style="list-style-type: none"> • Only process TimeSlotInformation that refers to a date after the current system date. For example, when a CalendarEntryPeriod specifies "Monday" the system must only change the slots for future Mondays within the DateTimeRange. • Remove slots from the system whose attribute TimeSlotsAvailability = "No" • Add or update the contingencies on slots in the system whose TimeSlotAvailability is set to "Yes".
CALENDAR_00 6	<p>If TransportModeType = "Road" and QuantityType = "Count" then the QuantityInformation value specifies the number of trucks that can load or unload at the given time.</p>

Calendar

papiNet Standard - Version 2.31

Calendar Structure

Understanding the Diagrams and Content

This section provides a graphical view of the schema structures, a

Calendar

papiNet Standard - Version 2.31

discussion of the item's children. You can find additional information about papiNet and the standard at www.papiNet.org.

The graphics contain content model indicators, cardinality indicators, and data type information.

Associated with each graphic are the definitions for the parent item and any associated child items. All attributes are listed first, followed by the elements.

The following information should help you interpret and understand this standard. Please note the following:

- Content Model and Cardinality operate together to determine if the element or attribute are required in the instance document.
- The same attribute can never appear multiple times in the same element so, you will never see a multiple cardinality indicator.

Content model indicators:

There are three possible types of content: "sequence", "choice", and "all". The papiNet standard currently does not use the "all" construct.

- (sequence)
The sequence of the items to the right of the graphic (or below the text) is required.
- (choice)
A choice of the items to the right of the graphic (or below the text) is permitted.
- (all)
All the items to the right of the graphic are required.

Cardinality indicators:

- Dotted line around element or attribute.
A single instance of the item can optionally exist.
- Dotted line around item with range indicated below.
Multiple instances of the item can optionally exist.
- Solid line around item.
A single instance of the item must exist.
- Solid line around item with range indicated below
At least one instance must exist; multiple instances can optionally exist.

Datatype indication:

When a data type is assigned to an element (either a simple type or complex type the name of the data type is presented beneath the item name in the graphic.

- In some cases additional information about the data type is presented (the default value).

Elements can either have content that is textual/numeric in nature or content that is made up of additional elements and/or attributes.

Calendar

papiNet Standard - Version 2.31

- When the content is textual/numeric in nature “three straight horizontal lines” will appear in the upper left-hand corner of the graphic. Pay attention to these elements because they are where you will be entering your information.
- When the content is made up of additional elements and/or attributes a “gray-box” will appear on the right-hand side of the graphic.
- If the graphic shows both the horizontal lines and the gray-box then, in the papiNet standard, the content below the element are attributes.

Calendar
papiNet Standard - Version 2.31

Calendar Root Element

Calendar

papiNet Standard - Version 2.31

Calendar

The Calendar root element.

CalendarType [attribute]

CalendarType is mandatory. A single instance is required.

Identifies the intention of the entire calendar message.

This item is restricted to the following list.

LoadingSchedule

The schedule for transport vehicle loading.

OfficeSchedule

The schedule for office personnel.

SupportSchedule

The support schedule for transport operations.

UnloadingSchedule

The schedule for transport vehicle unloading.

CalendarStatus [attribute]

CalendarStatus is optional. A single instance might exist.

Identifies the status of the entire calendar message.

This item is restricted to the following list.

Amended

Cancelled

Original

Language [attribute]

Language is optional. A single instance might exist.

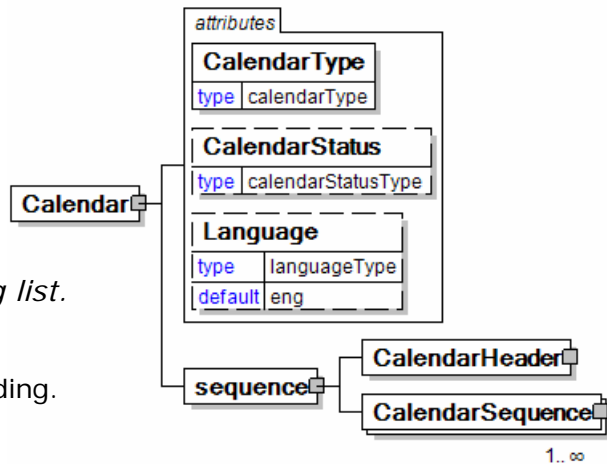

XML has embraced 2 and 3 digit language codes through the application of an addendum to the standard.

Information on the content of this attribute is available at <http://www.loc.gov/standards/iso639-2/> this is the official site of the ISO 639-2 Registration Authority.

- <http://www.w3.org/International/O-HTML-tags.html> provides an explanation of the errata updating XML.
- <http://www.ietf.org/rfc/rfc3066.txt> is the key document that is referenced in the above errata.

(sequence)

The contents of (sequence) are mandatory. A single instance is required.

Calendar

papiNet Standard - Version 2.31

CalendarHeader

CalendarHeader is mandatory. A single instance is required.

A group item containing generic information applicable to the entire calendar.

CalendarSequence

CalendarSequence is mandatory. One instance is required, multiple instances might exist.

A group item containing information that relates to a line on the calendar.

Calendar
papiNet Standard - Version 2.31

Primary Elements

Calendar

papiNet Standard - Version 2.31

CalendarHeader

A group item containing generic information applicable to the entire calendar.

(sequence)

The contents of (sequence) are mandatory. A single instance is required.

CalendarNumber

CalendarNumber is mandatory. A single instance is required.

The sequential number that uniquely identifies the calendar message.

CalendarIssueDate

CalendarIssueDate is mandatory. A single instance is required.

The date and optionally time when the calendar message was created.

RequestNumber

RequestNumber is optional. A single instance might exist.

A unique tracking number specifically identifying the InfoRequest message to the originator. The tracking number is returned with the "information", the answer, to help match the answer to the request.

SenderParty

SenderParty is mandatory. A single instance is required.

The business entity issuing the business document, the source of the document.

- This is the same entity as the "From" party in the ebXML message service envelope. The entity responsible for the content. If the sender party has outsourced the transmission function to a third party the sender party is the original party not the party performing the transmission service.

ReceiverParty

ReceiverParty is mandatory. One instance is required, multiple instances might exist.

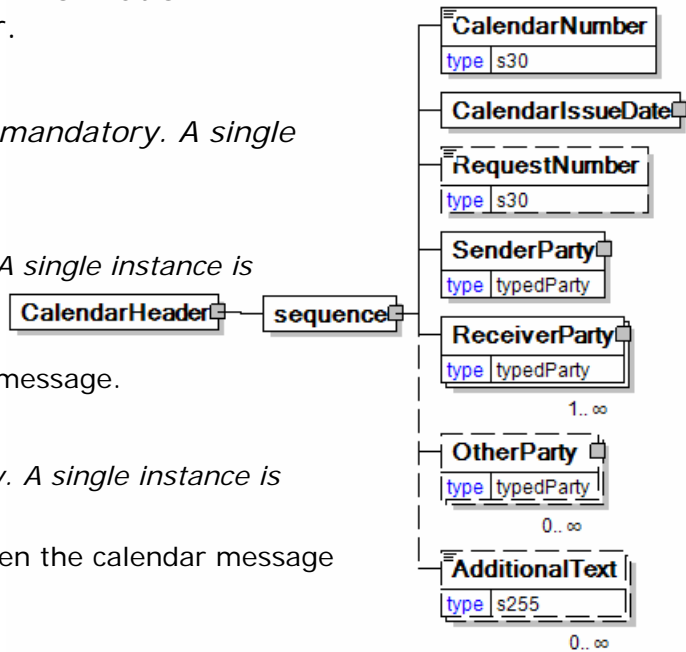

The business entity for whom the business document is intended, the destination of the document.

- This is the same entity as the "To" party in the ebXML message service envelop. The entity interested in the content. If the receiver party has outsourced the message receipt function to a third party the receiver party is the intended party not the party performing the receiving process.

OtherParty

OtherParty is optional. Multiple instances might exist.

An organisation or business entity other than those specifically detailed within a

Calendar

papiNet Standard - Version 2.31

business document.

AdditionalText

AdditionalText is optional. Multiple instances might exist.

A text field that is used to communicate information not previously defined or for special instructions. To be used only for circumstances not covered by specific elements.

Calendar

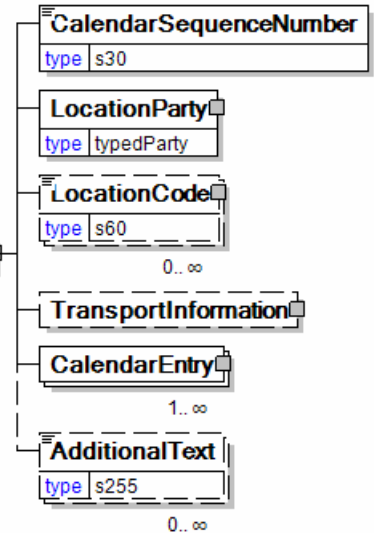

papiNet Standard - Version 2.31

CalendarSequence

A group item containing information that relates to a line on the calendar.

(sequence)

The contents of (sequence) are mandatory. A single instance is required.

CalendarSequenceNumber

CalendarSequenceNumber is mandatory. A single instance is required.

The sequential number that uniquely identifies the calendar sequence within the calendar message.

LocationParty

LocationParty is mandatory. A single instance is required.

The organization or business entity where the business event took place or will take place.

LocationCode

LocationCode is optional. Multiple instances might exist.

A code used to identify a specific physical location within a site identified by a party, e.g. a loading station in a warehouse or an unloading station at a printer site.

TransportInformation

TransportInformation is optional. A single instance might exist.

A grouping element for transport information.

CalendarEntry

CalendarEntry is mandatory. One instance is required, multiple instances might exist.

Detailed description of the times and contingencies for the given LocationParty.

AdditionalText

AdditionalText is optional. Multiple instances might exist.

A text field that is used to communicate information not previously defined or for special instructions. To be used only for circumstances not covered by specific elements.

Calendar

papiNet Standard - Version 2.31

CalendarEntry

Detailed description of the times and contingencies for the given LocationParty.

CalendarEntryPeriod [attribute]

CalendarEntryPeriod is mandatory. A single instance is required.

Describes the period to which the given times and contingencies apply. This can be either a weekday or a date range. If it is a date range, the DateTimeRange element is used to specify the range.

This item is restricted to the following list.

Monday

Tuesday

Wednesday

Thursday

Friday

Saturday

Sunday

DateTimeRange

(sequence)

The contents of (sequence) are mandatory. A single instance is required.

TimeSlotInformation

TimeSlotInformation is mandatory. One instance is required, multiple instances might exist.

Description of the beginning and end of a time slot and the contingencies it contains.

DateTimeRange

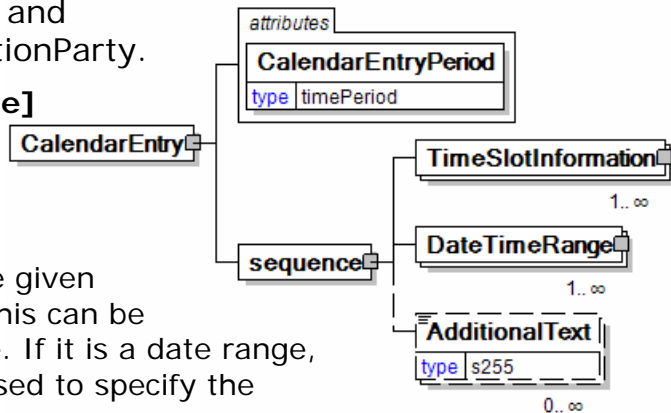

DateTimeRange is mandatory. One instance is required, multiple instances might exist.

The delivery date and/or time range.

AdditionalText

AdditionalText is optional. Multiple instances might exist.

A text field that is used to communicate information not previously defined or for special instructions. To be used only for circumstances not covered by specific elements.

Calendar

papiNet Standard - Version 2.31

Calendar Business Scenarios

Calendar Scenario Listing

Examples of how times and contingencies are specified and changed with the calendar message.

Scenario A	Original Calendar from the consignor or consignee to the carrier specifying office opening times
Scenario B	Original Calendar from the consignor or consignee to the carrier specifying contingencies for loading
Scenario C	Changes to the opening times for a given date range
Scenario D1	Changes to the contingencies for a specific day (e.g. because of a national holiday)
Scenario D2	Changes to the contingencies for a date range (e.g. because of a holidays in August)
Scenario D3	Changes to the contingencies for a date range (e.g. changed amount of contingencies and slots)

Scenario A

Message	Calendar
Type	Any of the calendar types.
Scenario	Original Calendar from the consignor to a carrier specifying office opening times.
Outcome	Opening times are entered into the carriers system.
Initiator	Consignor
Receiver	Carrier
Preconditions	None
XML File	Calendar_Scenaro_A.xsd
Trigger	None
Step 1.	Consignor sends Calendar message <ul style="list-style-type: none"> • CalendarType = "Office" • TimeSlotAvailability = "Yes" for available

Calendar papiNet Standard - Version 2.31

	opening times
--	---------------

Scenario B

Message	Calendar
Type	Any of the Calendar types.
Scenario	Original Calendar from the consignor to the carrier specifying contingencies for loading
Outcome	Contingencies are entered into the carriers system
Initiator	Consignor
Receiver	Carrier
Preconditions	None
XML File	Calendar_Scenario_B.xsd
Trigger	None
Step 1.	Consignor sends Calendar message <ul style="list-style-type: none"> • CalendarType = "Loading" • TransportModeType = "Road" • QuantityType = "Count"

Scenario C

Message	Calendar
Type	Any of the Calendar types.
Scenario	Changes to the opening times for a given date range
Outcome	The calendar inside the carriers system is updated
Initiator	Consignor
Receiver	Carrier
Preconditions	A original calendar for the given date range has to exist
XML File	Calendar_Scenario_C.xsd
Trigger	Consignor has changed the office hours for the

Calendar

papiNet Standard - Version 2.31

	given date range
Step 1.	<p>Consignor sends Calendar message</p> <ul style="list-style-type: none"> • CalendarType = "Office" • DateTimeRange specifies for which dates the changes apply • Set TimeSlotAvailability = "No" for opening times that have been removed • Set TimeSlotAvailability = "Yes" for opening times that are unchanged or added
Step 2.	Carrier adjusts the stored opening times for the given dates

Scenario D1

Message	Calendar
Type	Any of the Calendar types.
Scenario	Changes to the contingencies for a specific day (e.g. because of a national holiday)
Outcome	The calendar inside the carriers system is updated
Initiator	Consignor
Receiver	Carrier
Preconditions	A original calendar for the given date range has to exist
XML File	Calendar_Scenario_D.xsd
Trigger	Consignor has changed the contingencies for the given date range
Step 1.	<p>Consignor sends Calendar message</p> <ul style="list-style-type: none"> • CalendarType = "Loading" • DateTimeRange specifies for which dates the changes apply • Set TimeSlotAvailability = "No" for contingencies that have been removed • Set TimeSlotAvailability = "Yes" for contingencies that are unchanged or added

Calendar

papiNet Standard - Version 2.31

Step 2.	Carrier adjusts the stored contingencies for the given dates
----------------	--

Scenario D2

Message	Calendar
Type	Any of the Calendar message types.
Scenario	Changes to the contingencies for a date range (e.g. because of a holidays in August)
Outcome	The calendar inside the carriers system is updated
Initiator	Consignor
Receiver	Carrier
Preconditions	A original calendar for the given date range has to exist
XML File	Calendar_Scenario_D.xsd
Trigger	Consignor has changed the contingencies for the given date range
Step 1.	Consignor sends Calendar message <ul style="list-style-type: none"> • CalendarType = "Loading" • DateTimeRange specifies for which dates the changes apply • Set TimeSlotAvailability = "No" for contingencies that have been removed • Set TimeSlotAvailability = "Yes" for contingencies that are unchanged or added
Step 2.	Carrier adjusts the stored contingencies for the given dates

Scenario D3

Message	Calendar
Type	Any of the Calendar types.
Scenario	Changes to the contingencies for a date range (e.g. changed amount of contingencies and slots)

Calendar papiNet Standard - Version 2.31

Outcome	The calendar inside the carriers system is updated
Initiator	Consignor
Receiver	Carrier
Preconditions	A original calendar for the given date range has to exist.
XML File	Calendar_Scenario_D.xsd
Trigger	Consignor has changed the contingencies for the given date range
Step 1.	<p>Consignor sends Calendar message</p> <ul style="list-style-type: none"> • CalendarType = "Loading" • DateTimeRange specifies for which dates the changes apply • Set TimeSlotAvailability = "No" for contingencies that have been removed
Step 2.	Carrier adjusts the stored contingencies for the given dates
