Copyright

Copyright 2000 - 2015 papiNet G.I.E ("papiNet") and International Digital Enterprise Alliance, Inc. ("IDEAlliance") collectively "Copyright Owner". All rights reserved by the Copyright Owner under the laws of the United States, Belgium, the European Economic Community, and all states, domestic and foreign. This document may be downloaded and copied provided that all copies retain and display the copyright and any other proprietary notices contained in this document. This document may not be sold, modified, edited, or taken out of context such that it creates a false or misleading statement or impression as to the purpose or use of the papiNet specification, which is an open standard. Use of this Standard, in accord with the foregoing limited permission, shall not create for the user any rights in or to the copyright, which rights are exclusively reserved to the Copyright Owner.

papiNet, IDEAlliance, and the members of all papiNet Groups (collectively and individually, "Presenters") make no representations or warranties, express or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, title, or non-infringement. The presenters do not make any representation or warranty that the contents of this document are free from error, suitable for any purpose of any user, or that implementation of such contents will not infringe any third party patents, copyrights, trademarks or other rights. By making use of this document, the user assumes all risks and waives all claims against Presenters.

In no event shall Presenters be liable to user (or other person) for direct, indirect, special or consequential damages arising from or related to any use of this document, including, without limitation, lost profits, business interruption, loss of programs, or other data on your information handling system even if Presenters are expressly advised of the possibility of such damages.

Use of Documents in papiNet Implementations

Documents may be used as templates for a papiNet implementation. The Presenters grant the right to modify and edit them to fit an actual implementation project provided all copies display the copyright and any other proprietary notices contained in this document. Such modified documents must not be distributed beyond the trading partners implementing or maintaining a papiNet connection.

Availability Documentation

Availability e-Document Overview

The purpose of the Availability e-Document is to provide a means to ask about the availability of the specified product. The amount of the product immediately available (on-hand) is anticipated to be returned. Optionally, the anticipated availability of the product at a point in future can be communicated. The Availability e-Document returns to the requestor the answer to the question, "Does the product exist?"

Prior to implementing an Availability e-Document it is assumed that the parties involved have opened a trading partner relationship and a collaborative agreement has been reached. Such an agreement might include frequency of communication, content details, etc.

A trading partner sends an Availability e-Document to another trading partner on an event basis agreed between them. The event that triggers an Availability e-Document might be the receipt of an InfoRequest e-Document, a time interval, or perhaps a manufacturing stage.

Availability Contrasted with Other e-Documents

The Availability e-Document differs from the RFQ/RFQResponse e-Document pair in that:

- The RFQ pair may actually reserve the product for a period of time.
- The RFQ communicates pricing information, shipping conditions, terms of payment, and other financial information.
- A PurchaseOrder frequently follows an RFQ with the PurchaseOrder referencing the RFQResponse number
- An RFQ also has a 'life'. That is, it may continue to exist for a specified length of time before the receiver of the RFQ either receives a Purchase Order that references the RFQ or until the expiry period comes to an end.

The Availability e-Document differs from the Planning e-Document in that:

- The Availability e-Document will not specify purchase order related information
- The Availability e-Document does not specify shipping details related to the product for the requesting party or buyer party
- The available product information itself may or may not be as firm as the same information in the Planning e-Document would be.

The Scope of the Availability e-Document

The Availability e-Document includes:

- A specific date upon which the Availability is generated
- Sender, Receiver, and Requesting Parties
- Product
- TimePeriod
- Quantity

The Availability e-Document may include:

Availability

papiNet Standard - Version 2.31

- Buyer, Ship To, and End User parties.
 - InformationalQuantity(s)
 - LocationParty and MachineID
-

Availability Types

There are no Availability types. To get new and/or corrected information a new e-Document must be sent.

Business Rules for the Availability e-Document

General Business Rules

The following table lists the business rules that apply to Availability e-Document.

Identifier	Business Rule
AV_001	At least one AvailabilityDetail must be present in the e-Document. If neither on-hand nor planned inventory is available for the Product, then a Quantity of zero must be returned.

Processing the Availability e-Document

The Availability e-Document is the proper response to an InfoRequest containing the InfoRequestType of "AvailabilityStatus". Alternatively, it may be published on a previously agreed upon schedule based on time intervals or process manufacturing stages. Under the latter scenario, the supplier would publish the e-Document at the agreed upon schedule without requiring an InfoRequest e-Document as the trigger.

It is unlikely that the Availability e-Document would be received and processed by the recipient's procurement or order generation system. The likeliest scenario is that the Availability e-Document would be received and printed out for distribution to interested parties or alternatively published 'on line' and viewed via a URL or some form of website access designed to display the status.

The Availability e-Document is an information-only e-Document. The Availability e-Document does not alter the legal agreement between the parties regarding order submission and fulfilment. If the Availability e-Document indicates a serious problem or issue with the ability of the supplier to fulfil the order, then the parties involved must resolve the issue.

Understanding the Diagrams and Content

This section provides a graphical view of the schema structures, a discussion of the item's children. You can find additional information about papiNet and the standard at www.papiNet.org.

The graphics contain content model indicators, cardinality indicators, and data type information.

Availability

papiNet Standard - Version 2.31

Associated with each graphic are the definitions for the parent item and any associated child items. All attributes are listed first, followed by the elements.

The following information should help you interpret and understand this standard. Please note the following:

- Content Model and Cardinality operate together to determine if the element or attribute are required in the instance document.
- The same attribute can never appear multiple times in the same element so, you will never see a multiple cardinality indicator.

Content model indicators:

There are three possible types of content: "sequence", "choice", and "all". The papiNet standard currently does not use the "all" construct.

- (sequence)

The sequence of the items to the right of the graphic (or below the text) is required.

- (choice)

A choice of the items to the right of the graphic (or below the text) is permitted.

- (all)

All the items to the right of the graphic are required.

Cardinality indicators:

- Dotted line around element or attribute.

A single instance of the item can optionally exist.

- Dotted line around item with range indicated below.

Multiple instances of the item can optionally exist.

- Solid line around item.

A single instance of the item must exist.

- Solid line around item with range indicated below

At least one instance must exist; multiple instances can optionally exist.

Datatype indication:

When a data type is assigned to an element (either a simple type or complex type) the name of the data type is presented beneath the item name in the graphic.

- In some cases additional information about the data type is presented (the default value).

Elements can either have content that is textual/numeric in nature or content that is made up of additional elements and/or attributes.

- When the content is textual/numeric in nature "three straight horizontal lines" will appear in the upper left-hand corner of the graphic. Pay attention to these elements because they are where you will be entering your information.
- When the content is made up of additional elements and/or attributes a "gray-box" will appear on the right-hand side of the graphic.
- If the graphic shows both the horizontal lines and the gray-box then, in the papiNet standard, the content below the element are attributes.

Availability

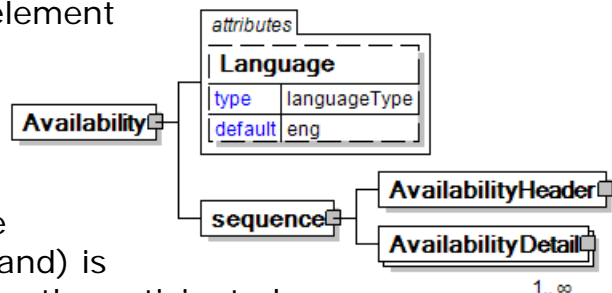

papiNet Standard - Version 2.31

Availability Root Element

Availability

The Availability element is the root element for the Availability e-Document .

The purpose of the Availability e-Document is to provide a means to ask about the availability of the specified product. The amount of the product immediately available (on-hand) is anticipated to be returned. Optionally, the anticipated availability of the product at a point in future can be communicated.

Language [attribute]

Language is optional. A single instance might exist.

XML has embraced 2 and 3 digit language codes through the application of an addendum to the standard.

Information on the content of this attribute is available at <http://www.loc.gov/standards/iso639-2/> this is the official site of the ISO 639-2 Registration Authority.

- <http://www.w3.org/International/O-HTML-tags.html> provides an explanation of the errata updating XML.
- <http://www.ietf.org/rfc/rfc3066.txt> is the key document that is referenced in the above errata.

(sequence)

The contents of (sequence) are mandatory. A single instance is required.

AvailabilityHeader

AvailabilityHeader is mandatory. A single instance is required.

The AvailabilityHeader contains items that apply to the entire Availability e-Document.

AvailabilityDetail

AvailabilityDetail is mandatory. One instance is required, multiple instances might exist.

AvailabilityDetail provides the detailed availability information for the requested product.

Availability

papiNet Standard - Version 2.31

Primary Elements

AvailabilityHeader

The AvailabilityHeader contains items that apply to the entire Availability e-Document.

(sequence)

The sequence of items below is mandatory. A single instance is required.

AvailabilityNumber

AvailabilityNumber is mandatory. A single instance is required.

An element that contains the unique identifying number of the Availability e-Document.

AvailabilityIssueDate

AvailabilityIssueDate is mandatory. A single instance is required.

The date and time that the Availability was issued.

RequestNumber

RequestNumber is optional. A single instance might exist.

A unique tracking number specifically identifying the InfoRequest e-Document to the originator. The tracking number is returned with the "information", the answer, to help match the answer to the request.

SenderParty

SenderParty is optional. A single instance might exist.

The business entity issuing the business document, the source of the document.

- The entity responsible for the content. If the sender party has out sourced the message service to a third party the SenderParty is the issuer of the e-Document and not the party performing the transmission service of the electronic e-Document.

ReceiverParty

ReceiverParty is optional. Multiple instances might exist.

The business entity for whom the business document is intended, the destination of the document.

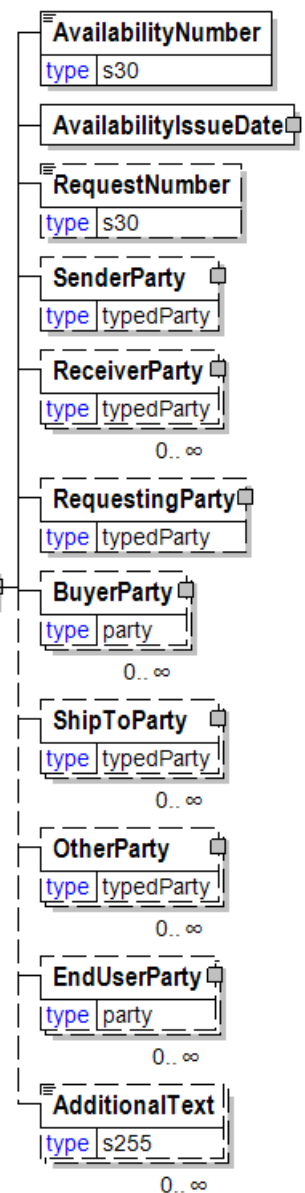

- The entity interested in the content. If the receiver party has outsourced the message service to a third party the ReceiverParty is the intended party for the e-Document and not the party performing the receiving service of the electronic e-Document.

RequestingParty

RequestingParty is optional. A single instance might exist.

The party requesting the information.

BuyerParty

Availability

papiNet Standard - Version 2.31

BuyerParty is optional. Multiple instances might exist.

The legal entity to which the product is sold. Also commonly referred to as the sold-to party or customer. If no OtherParty is defined as the Payer, the Buyer is the Payer.

ShipToParty

ShipToParty is optional. Multiple instances might exist.

The name and/or address to which the goods should be delivered with the party type indicated by the PartyType attribute.

OtherParty

OtherParty is optional. Multiple instances might exist.

An organisation or business entity other than those specifically detailed within a business document.

EndUserParty

EndUserParty is optional. Multiple instances might exist.

The party using, consuming, or converting the product. For example, a printer using paper reels for a print job for a publisher. The final ShipTo destination for a product is normally to the end user's facilities.

AdditionalText

AdditionalText is optional. Multiple instances might exist.

A text field that is used to communicate information not previously defined or for special instructions. To be used only for circumstances not covered by specific elements.

Availability

papiNet Standard - Version 2.31

AvailabilityDetail

AvailabilityDetail provides the detailed availability information for the requested product.

(sequence)

The sequence of items below is mandatory. A single instance is required.

Product

Product is mandatory. A single instance is required.

Product is a group item defining the article and its characteristics. Product is used to specify product characteristics organized by

ProductIdentifier, ProductDescription, and Classification. Book Manufacturing, Label Stock, Paper, Pulp, Recovered Paper, Wood Products, and Virgin Fibre market segments have defined their product characteristics and conversion features for implementation in papiNet.

TimePeriod

TimePeriod is mandatory. A single instance is required.

The TimePeriod element is used to communicate a duration period of time as indicated in PeriodType.

Quantity

Quantity is optional. A single instance might exist.

The Quantity element contains attributes that provide information about the type of quantity that is being communicated, the context in which the particular quantity is to be viewed, and (if the quantity represents an adjustment) an adjustment type.

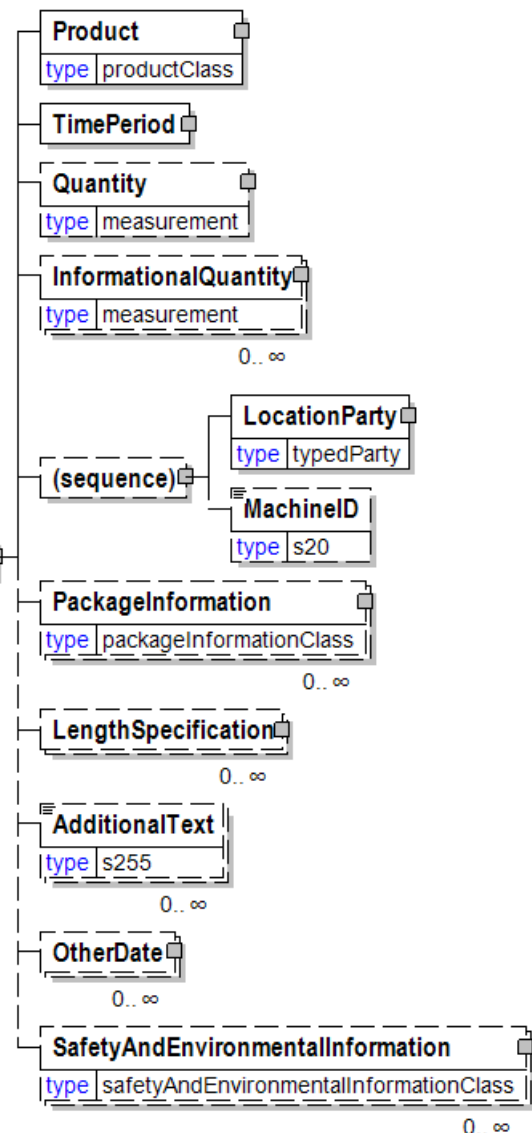

The Quantity element contains three child elements that enable you to communicate a range of values for the quantity and a target or actual value. It is at this level (Value, RangeMin, and RangeMax) that the unit of measure is specified. This permits the range to be specified in a different unit of measure than the target.

InformationalQuantity

InformationalQuantity is optional. Multiple instances might exist.

A quantity given in a valid UOM used for information purposes only (not for calculation). For example, an ordered quantity was 100 reels as opposed to the invoice quantity of 20,000 pounds.

(sequence)

Availability

papiNet Standard - Version 2.31

The sequence of items below is optional. A single instance might exist.

LocationParty

LocationParty is mandatory. A single instance is required.

The organization or business entity where the business event took place or will take place.

MachineID

MachineID is optional. A single instance might exist.

An identifier assigned to the particular machine being referenced. For example, a machine could be a paper machine, an off-line coater, a sheeter, or a printing press. The particular machine being referenced will be determined by the business event being supported.

PackageInformation

PackageInformation is optional. Multiple instances might exist.

The purpose of the PackageInformation structure is to clearly identify physical handling items that constitute the delivery.

PackageInformation is the highest level of product packaging it describes the shipping or warehousing unit.

- If you are communicating a package, usually for logistics or transport purposes, you should include the PackageType, Identifier, ItemCount, and Quantity. (Note: you still have the ability to describe the item with one of the "named" items.)
- If you are communicating one of the named Items there is no need to include PackageType, Identifier, ItemCount, and Quantity.

Since either of these two approaches can be used the entire contents of this element are optional even though the parent may be required. It is expected that you will fill in the appropriate details.

LengthSpecification

LengthSpecification is optional. Multiple instances might exist.

Length specification of the wood product.

AdditionalText

AdditionalText is optional. Multiple instances might exist.

A text field that is used to communicate information not previously defined or for special instructions. To be used only for circumstances not covered by specific elements.

OtherDate

OtherDate is optional. Multiple instances might exist.

A date that may not be specifically detailed within a document (example: print date at the PurchaseOrderLineItem).

SafetyAndEnvironmentalInformation

SafetyAndEnvironmentalInformation is optional. Multiple instances might exist.

Name of certification type, if any, on the goods (For example, FSC, PEFC). SafetyAndEnvironmental needs a value or measurement to communicate the percentage of the product is certified (for example, 75% is certified by the indicated agency).

Availability Business Scenarios

Availability Scenario Listing

Scenario A	Buyer/Publisher has a potential job to source a specific type of paper for. The InfoRequestType is "Availability".
Scenario B	Partners have previously agreed upon the Supplier publishing a periodic Availability update on a specific schedule. There is no InfoRequest.
Scenario C	A small enterprise wants to check the availability of a product via a web browser or at an online marketplace. The InfoRequestType is "Availability".

Scenario A

E-Document	Availability
Scenario	Buyer has a potential job to source a specific type of paper for. The InfoRequestType is "Availability". (Note: a Publisher may be substituted for the Buyer in this scenario.)
Outcome	An InfoRequest is generated by the Buyer.
Initiator	Buyer
Receiver	Supplier
Trigger	None
Step 1.	Buyer records an original request into their system then sends it to the Supplier. <ul style="list-style-type: none"> • InfoRequestType = "Availability" • RequestNumber = unique number • SenderParty = buyer • RequestingParty = buyer • ReceiverParty = supplier • Product = specified product id
Step 2.	Seller receives an InfoRequest and responds with Availability. The seller is expected to return the quantity that is available on-hand and optionally return any planned inventory runs. <ul style="list-style-type: none"> • AvailabilityNumber = unique number • AvailabilityIssueDate = response date • SenderParty = supplier • RequestingParty = buyer

Availability

papiNet Standard - Version 2.31

	<ul style="list-style-type: none"> ReceiverParty = publisher <p>For on hand inventory:</p> <ul style="list-style-type: none"> TimePeriod = today Product = specified product id Quantity = quantity of on hand inventory QuantityTypeContext="OnHand" <p>Optionally for each manufacturing run:</p> <ul style="list-style-type: none"> TimePeriod = date of planned run Quantity = quantity of planned inventory QuantityTypeContext="Planned"
--	--

Scenario B

E-Document	Availability
Scenario	Partners have previously agreed upon the Supplier publishing a periodic Availability update on a specific schedule.
Outcome	An Availability e-Document is generated by the Supplier's system and received into the Buyer's system.
Initiator	Not applicable
Receiver	Buyer
Trigger	Pre-arranged schedule
Step 1.	<p>Supplier initiates an Availability e-Document for each agreed upon product at predefined intervals. At a minimum, all required elements and corresponding attributes are recorded:</p> <ul style="list-style-type: none"> AvailabilityNumber = unique number AvailabilityIssueDate = response date SenderParty = supplier RequestingParty = buyer ReceiverParty = buyer <p>For on hand inventory:</p> <ul style="list-style-type: none"> TimePeriod = today Product = specified product id Quantity = quantity of on hand inventory QuantityTypeContext="OnHand" <p>Optionally, for each manufacturing run:</p> <ul style="list-style-type: none"> TimePeriod = date of planned run Quantity = quantity of planned inventory

Availability

papiNet Standard - Version 2.31

- QuantityTypeContext="Planned"

Scenario C

E-Document	Availability
Scenario	A small enterprise wants to check the availability of a product via a web browser or at an online marketplace. The InfoRequestType is "Availability".
Outcome	An Availability e-Document is generated by the Supplier's system and received into the Buyer's system.
Initiator	Buyer/marketplace
Receiver	Supplier
Trigger	InfoRequest
Step 1.	<p>Buyer logs on to the marketplace's website and views open orders online and indicate orders for which status is requested. Marketplace creates InfoRequest and sends it to the Supplier.</p> <ul style="list-style-type: none"> • InfoRequestType = "Availability" • RequestNumber = unique number • SenderParty = marketplace • RequestingParty = buyer • ReceiverParty = supplier • Product = specified product id
Step 2.	<p>Supplier receives InfoRequest and responds with Availability.</p> <ul style="list-style-type: none"> • AvailabilityNumber = unique number • AvailabilityIssueDate = response date • SenderParty = supplier • RequestingParty = buyer • ReceiverParty = marketplace <p>For on hand inventory:</p> <ul style="list-style-type: none"> • TimePeriod = today • Product = specified product id • Quantity = quantity of on hand inventory • QuantityTypeContext="OnHand" <p>Optionally, for each manufacturing run:</p> <ul style="list-style-type: none"> • TimePeriod = date of planned run • Quantity = quantity of planned inventory • QuantityTypeContext="Planned"
